

HydroMark™

Innovative Paper Solutions

HydroMark is a high-performance paper designed to withstand exposure to water and moisture, making it ideal for a wide range of specialty printing applications. The unique substrate provides a combination of materials to create a durable, tear-resistant paper that can withstand exposure to water and other liquids.

The HydroMark paper line provides an alternative engineered solution to traditional higher cost printing solutions. The elimination of costly inks and treatments means more money to the bottom line and can be easily used with most types of commercial printing applications. It's also durable and tear-resistant, ensuring that your printed materials will remain intact and legible for longer periods of time. Whether you're a manufacturer who needs to print outdoor signage or a packaging specialist that needs a waterproof liner, HydroMark is the perfect choice.

1. **Composition:** Created with a blend of synthetic and cellulose materials bonded together using a proprietary manufacturing process. This combination of materials creates a durable, tear-resistant paper that can withstand exposure to water and other liquids.
2. **Coating:** Our paper is coated with a special waterproof coating that repels water and prevents ink from smudging or requiring UV curing. This coating is applied using a precise, controlled process that ensures uniform coverage and optimal performance.
3. **Thickness:** Available in a range of thicknesses, from lightweight 55# to heavy-duty 70# with a caliper range of 4.0 pt. to 6.5 pt. This allows you to choose the right paper for your specific printing needs.
4. **Printability:** Our paper is compatible with a wide range of printing technologies, including inkjet, flexo, and offset printing. It provides excellent print quality and color saturation, ensuring that your printed materials look sharp and vibrant.
5. **Durability:** Our waterproof paper is highly resistant to tearing, fading, and abrasion, ensuring that your printed materials will remain legible and professional-looking for longer periods of time.

HydroMark waterproof paper is a high-quality, **cost effective solution** for any printing applications where water resistance or moisture resistance is important. We have invested significant time, resources, and expertise into developing and refining this technology, and we are proud to offer it exclusively to our customers.
